

KASO Data Catalog

Technical & Diagnostic Reference

Skladové karty

Product Master / skladové karty

Schválený MC kontrakt skladových kariet pre bezpečnú read-only diagnostiku.

Repository: `mtasky-mccarter/kaso-data-catalog`

Canonical branch: `main`

Contract: `pm.contract.skladove_karty.1_0` | version: 1.0 | maturity: AGENT-READY

Authoritative environment / owner: MC / MC

Canonical input SHA-256: `44d817d6e8d1d38553c0990c648642308a1db506802e2f61319e061bda968a58`

Obsah

- 1 Účel rozsah a orientácia
- 2 Identita grain a schválené významové pravidlá
- 3 Fyzické objekty a úplný root inventár
- 4 Satelity a referenčné polia
- 5 Constraints indexy a väzby
- 6 Dátované hodnotové domény
- 7 Časový model a zdroje pravdy
- 8 Zdrojové toky a Mutation Matrix
- 9 Závislosti API a systémové hranice
- 10 Kvalita údajov a známe nálezy
- 11 DO NOT ASSUME
- 12 Diagnostické playbooky
- 13 Kanonické read only SQL
- 14 Neblokujúci backlog
- 15 Revízna história
- 16 Dôkazy a proveniencia
- 17 Register kanonických vstupov

1 Účel rozsah a orientácia

Kanonický zdroj: catalog/master/skladove-karty/contract.yaml

EXHAUSTIVE DEPENDENCY-GRADE / AGENT-READY within approved MC scope.

Referencia skladových kariet slúži na bezpečné čítanie aktuálneho mastera, interpretáciu jeho satelitov a diagnostiku. Kanonické YAML a SQL sú autoritou; dokument je ich odvodená publikácia.

contract id: pm.contract.skladove_karty.1_0

domain: master

title sk: Product Master / skladové karty

purpose sk: EXHAUSTIVE DEPENDENCY-GRADE / AGENT-READY within approved MC scope.

scope includes: MC.SK_LAD_KARTA

MC.SK_LAD_KARTA_LB

MC.B_KOD_U

MC.SK_LOG_UDAJE

MC.SK_LAD_DODAVATEL

MC.SK_LAD_KARTA_FU

MC.SK_LAD_PARTNER_KODY

MC.SK_JEDNOTKY

MC.CIS_POZNAMKY

MC.CIS_POZNAMKY_TYPY

MC.SK_NAKL_POLOZKY

MC.NAKL_KOEF

MC.CIS_DU_O

MC.IMP_MC_SK_NAKL_POL

scope excludes: Kusy

Blokácie

Pasívne kusy

Inventory/WMS lifecycle

Manufacturing

Orders

Issues

Receipts

Pricing

authoritative environment: MC

authoritative owner: MC

maturity: AGENT-READY

boundary refs: []

Dôkazy: pm.evidence.handoff

Obmedzenia: RAW CURRENT; selective history only.

Seven approved non-blocking gaps retained.

All 169 MC.SKLADE_KARTA canonical aliases approved on 2026-09-17; naming layer only. Satellite aliases remain deferred.

Publication approved for version 1.0 on 2026-09-23; canonical YAML/SQL remains authoritative.

Hodnota null označuje kanonicky chýbajúcu hodnotu. Oracle comments sú technické komentáre, nie samostatná business autorita. Statusy TREBA OVERIŤ, DATA GAP, DEPENDENCY ONLY a TECHNICKY ZNÁME sa nemenia publikovaním.

Úplný inventár root polí a diagnostické SQL sú nižšie. Rozsiahle Oracle entity, raw source windows, inbound FK a lexikálne API referencie sú uvedené prehľadovo s presnými zdrojmi; ich úplné záznamy ostávajú v kanonickom katalógu, ktorý je zahrnutý v kontrolnom súčte publikácie.

2 Identita grain a schválené významové pravidlá

Kanonický zdroj: catalog/master/skladove-karty/do-not-assume.yaml

pm.rule.handoff_section_03

rule id: pm.rule.handoff_section_03

Scope: pm.object.sklad_karta

Pravidlo: Business contract

MC.SK_LAD_KARTA is the central current master of stock/product cards used across BarIS/Dreamer/KASO processes. One root row = one skladová karta.

Scope includes root master plus directly maintained/interpreted master satellites and important lookups required to safely use the card:

- MC.SK_LAD_KARTA
- MC.SK_LAD_KARTA_LB
- MC.B_KOD_U
- MC.SK_LOG_UDAJE
- MC.SK_LAD_DODAVATEL
- MC.SK_LAD_KARTA_FU
- MC.SK_LAD_PARTNER_KODY
- MC.SK_JEDNOTKY
- relevant lookup/reference objects confirmed by metadata/live joins
- typed notes: CIS_POZNAMKY + CIS_POZNAMKY_TYPY, with product-context RID_V relation
- cost/regulatory layer: SK_NAKL_POLOZKY + NAKL_KOEF and relevant helper definitions
- relevant CIS_DU_O definitions for DU1/4/5/6/7/8/9
- report runtime objects only as downstream evidence/boundary for Recyklačný fond SK/CZ

Explicitly exclude from Product Master:

- Kusy
- Blokácie
- Pasívne kusy

These belong to a future Stock/Inventory domain.

Manufacturing, orders, issues, receipts, pricing, WMS/inventory and other transaction domains remain boundaries unless an already-canonical contract is referenced.

Dôkazy: pm.evidence.handoff

pm.rule.handoff_section_04

rule id: pm.rule.handoff_section_04

Scope: pm.object.sklad_karta

Pravidlo: Root physical facts — MC.SK_LAD_KARTA
Snapshot / mapping closure: 2026-09-14 to 2026-09-15.

- 169 physical columns
- 110 NUMBER
- 55 VARCHAR2
- 3 DATE: ZALOZENA, DATUM_MINMAX, DATUM
- 1 XMLTYPE
- PK: XPK_SK_LAD_KARTA(ID)
- ID NUMBER(8), NOT NULL
- SK_ID NOT NULL, unique
- RID VARCHAR2(16), NOT NULL, unique
- RID_OBJ VARCHAR2(16), NOT NULL, unique index
- INT_KOD VARCHAR2(30), NOT NULL
- design uniqueness: (INT_KOD, SK_LAD)
- current MC INT_KOD is unique, but this is a snapshot fact, not a permanent/global contract.
- 32 outbound foreign keys
- 35 index rows / 31 index names
- 21 enabled direct triggers
- 416 dependency rows / 414 dependent objects
- 53 dependent views
- 33 source-visible direct writer objects outside C_SK_LAD_KARTA
- 324 inbound FKs from 294 tables to ID; 253 child FKs use KOD_ID

Current snapshot rows: 7,429.

Current equality observations:

- ID = SK_ID on 100% of current rows
- RID = RID_OBJ on 100% of current rows

These are current observations only, not cross-environment or historical identity rules.

Dôkazy: pm.evidence.handoff

pm.rule.handoff_section_05

rule id: pm.rule.handoff_section_05

Scope: pm.object.sklad_karta

Pravidlo: Identity / code rules

- Root grain: one current stock/product master card.
- ID is the physical PK.
- SK_ID/RID/RID_OBJ are alternate technical identifiers with their own uniqueness constraints/indexing.
- Preserve RID/code values as text where leading zeros are possible.

- INT_KOD is user-facing internal code. Do not assume universal numeric format, fixed length, or TO_NUMBER safety.
- Observed INT_KOD patterns include numeric, N-prefix, FIN/other alphanumeric. Prefixes are conventions, not replacement for typed classification.
- No global uniqueness may be assumed across MC/MCCZ/TEST/TESTCZ.

Dôkazy: pm.evidence.handoff

pm.rule.handoff_section_06

rule id: pm.rule.handoff_section_06

Scope: pm.object.sklad_karta

Pravidlo: Current state model

- USED = technical active/storno layer; it is not equivalent to "is sold".
- STAV = business/sales state layer; it is independent from USED.
- Current STAV distribution: 8=4366, 2=2549, 6=177, 3=168, 4=167, 0=2.
- Current USED distribution: 0=4504, 1=2925.
- 35 current rows have USED=1 and STAV=8, proving the two dimensions are not interchangeable.
- STAV=8 source flow calls MCCARTER_PLAN.MC_UKONCENY_PREDAJ_SK and can zero future OBCH_PL_O planned quantities.

T_TOVARU is the usable current type classification. Current examples/counts include:

- 1 Materiál: 2513
- 47 Náhradné diely: 1364
- 3 Výrobok: 1195
- 0 Tovar: 897
- 2 Polotovar: 649
- 7 labels/cartons: 325

Active Tovar + Výrobok snapshot: 556.

TYP_T:

- current population: 12 rows with value '00'
- PM-10B2 showed no resolution through TOVAR_TYP.ID, TOVAR_TYP.TYP_T, or CIS_TREE.TREE
- classify as TECHNICKY ZNÁME / business TREBA OVERIŤ, current unresolved legacy-like value
- DO NOT use as product classification in AI/DQ rules.

Dôkazy: pm.evidence.handoff

pm.rule.handoff_section_07

rule id: pm.rule.handoff_section_07

Scope: pm.object.sklad_karta

Pravidlo: Temporal contract

Classification: RAW CURRENT master.

- I_STAMP = technical insert stamp
- U_STAMP = last technical update stamp
- S_STAMP = technical remove/storno stamp
- N_STAMP = selective process stamp related to Novinka; not creation date, not universal lifecycle stamp
- SKLAD_KARTA_INTKOD_Z and HIST_ZMIEN provide selective history only
- SK_TEMP is a process/change queue, not full audit history
- arbitrary historical reconstruction of all master attributes is NOT available

Downstream historical transaction joined to current SKLAD_KARTA must not be treated as historical master truth unless the transaction stores its own confirmed snapshot.

Dôkazy: pm.evidence.handoff

pm.rule.handoff_section_08

rule id: pm.rule.handoff_section_08

Scope: pm.object.sklad_karta

Pravidlo: Self-reference semantics

NAHRADA

Technical mechanism is confirmed:

- SKLAD_KARTA.NAHRADA -> SKLAD_KARTA.ID
- one self-anchor per group (anchor ID = NAHRADA)
- other members point to the anchor
- PM-10F: 164 groups; 3,162 rows with NAHRADA<>0; 164 self anchors; 2,998 non-anchor members; 837 members USED=1
- groups are real and can be large

Business meaning is NOT confirmed. User does not know current business use and will verify with KASO.

Status: TECHNICKY ZNÁME + TREBA OVERIŤ (non-blocking).

AI/DQ MUST NOT treat group members as physically or commercially substitutable and MUST NOT merge/change cards based on NAHRADA.

HLAVNA_TP

- separate mechanism from NAHRADA
- current population effectively self-only
- related source function includes C_SKLAD_KARTA.ZmenPredajnyVariant and FLAGS_B position 41 logic
- no current multi-card variant group observed
- current business use remains non-blocking.

NAHRADZA_KARTU

- directional relation to an older/replaced card is source-visible
- current only about 13 nonzero links
- do not infer automatic business replacement/merge semantics beyond the confirmed directional technical link.

Dôkazy: pm.evidence.handoff

pm.rule.handoff_section_09

rule id: pm.rule.handoff_section_09

Scope: pm.object.sklad_karta

Pravidlo: Logistics master

SKLAD_KARTA_LB

- 73 fields
- FK KOD_ID -> SKLAD_KARTA.ID
- PK RID
- UQ(SKRAKA, SKLAD)
- 2,151 rows / 1,846 cards
- 450 active rows/cards context snapshot
- levels: 0 Kus, 1 SubKartón, 2 Kartón, 3 Vrstva, 4 Paleta
- active relevant Tovar+Výrobok: 429/556 cards with active LB; 13 cards have >1 active LB
- each relevant card with active LB has exactly one FLAGS_B[1] main LB
- active relevant LB rows: 442
- EAN/level snapshot: piece 442, carton 428, subcarton 0, layer 1, pallet 9

B_KOD_U

- 36 fields
- FK RID_SKLAD_KARTA_LB -> SKLAD_KARTA_LB.RID
- 4,929 rows; 4,907 linked
- no orphan LB in mapped snapshot
- linked KOD_ID matches LB
- source maintains codes for multiple packaging levels; reverse mutation exists
- FLAGS_B[2] is main code behavior; current main codes are piece EAN

Observed DQ candidates (not all are automatic business errors):

- 5 active LB missing exact piece B_KOD_U
- 4 active B_KOD_U unlinked to LB
- 1 linked to inactive LB
- 1 code not represented by LB level
- 14 main LB without main piece code
- 27 active codes shared across >1 KOD_ID

Root logistics fields are not a universal live roll-up of the packaging hierarchy.

Dôkazy: pm.evidence.handoff

pm.rule.handoff_section_10

rule id: pm.rule.handoff_section_10

Scope: pm.object.sklad_karta

Pravidlo: Supplier / VAT / partner satellites

SK_LOG_UDAJE

- 5,367 total, 1,723 active, 1,632 cards
- no root orphans in mapped snapshot
- current grain: KOD_ID + SKLAD_P + optional SARZA; current SARZA all NULL
- no active duplicate current natural grain
- contextual overrides of root KRAJINA_P / TYP_CENOVKY exist in API; current override population may be NULL

SKLAD_DODAVATEL

- 118 active rows / 115 cards / 17 suppliers
- no active duplicate (KOD_ID, ID_DODAVATELA)
- root DOD_SK matches 102; 13 cards have root main supplier absent from satellite
- source procedure ZapisHlavnehoDodavateľa may copy DOD_SK and DOD_KOD under conditions
- DOD_KOD, KOD_DOD and VYROBCA_KOD are NOT synonyms
- preferred business term for DOD_KOD: "kód dodávateľa"

SKLAD_KARTA_FU

- 2,561 active rows / 912 cards
- warehouses observed: 45=910, 51=830, 48=812, 55=9
- SAME_AS_ROOT snapshot: 2,080 false / 481 true
- effective VAT may be warehouse/session specific; root UROVEN_DPH is not universal.

SKLAD_PARTNER_KODY

- active 242 rows / 102 cards / 32 partners
- no duplicates on (KOD_ID, PARTNER, BALENIE) in snapshot
- (PARTNER, KOD_PARTNERA) is not globally unique
- DO NOT use ROWNUM=1 without the correct grain.

Dôkazy: pm.evidence.handoff

pm.rule.handoff_section_11

rule id: pm.rule.handoff_section_11

Scope: pm.object.sklad_karta

Pravidlo: Lookup/reference closure

Confirmed used references in mapped lookup scope had zero orphans in the tested snapshot.

Examples include MENY, COL_SADZOBNIK, KALKUL_POLOZKY, VYROBCOVIA, SKLAD_CS, KRAJINY, B_USERS, STAVY_SK, OBCH_PARTNERI, ART_SKUPINY,

OBCHODNE_ZNACKY and others defined by root FK metadata.

Important interpretation limits:

- VYROBCA currently mostly contains sentinel/technical values; do not treat as general manufacturer authority.
- lookup S_STAMP != 0 does not automatically invalidate an existing root reference.
- Oracle comments are technical clues, not sufficient business proof.

Dôkazy: pm.evidence.handoff

pm.rule.handoff_section_12

rule id: pm.rule.handoff_section_12

Scope: pm.object.sklad_karta

Pravidlo: Allergens / typed notes

Current operational allergen authority is typed notes, not root FLAGS_A/ALERGENY.

Product-context relation:

SKLAD_KARTA.RID -> CIS_POZNAMKY.RID_V -> CIS_POZNAMKY.TYP -> CIS_POZNAMKY_TYPY.ID

- CIS_POZNAMKY is generic/polymorphic globally; the product RID relation is valid only in product-card context.
- active typed notes snapshot: 915 on 594 SKUs; 34 active types
- allergen branch snapshot: 574 active allergen note records on 265 SKUs
- direct allergen and cross-contamination are separate semantics and must stay separate
- user/business confirms these notes are actively used and feed downstream production/manufacturing warnings/reports
- exact manufacturing reader in Oracle source was not resolved; keep Manufacturing as explicit boundary

Legacy/dormant mechanism:

- C_SKLAD_KARTA.GetAlergen/GetAlergeny uses FLAGS_A + LATKY_ZLOZENIA.PORADIE
- LATKY_ZLOZENIA type 000426 contains 14 standard allergen categories
- current root FLAGS_A and ALERGENY are entirely NULL
- classify as implemented but current-unpopulated/dormant; do not call obsolete without proof.

Open note-type ambiguity:

- 00048 "Alergény z krízovej kontaminácie - orechy"
- 00052 "Alergény z krízovej kontaminácie - orechy"

User cannot confirm whether 00048 is legacy/replaced by 00052. Keep non-blocking TREBA OVERIŤ; no auto-clean rule.

Dôkazy: pm.evidence.handoff

pm.rule.handoff_section_13

rule id: pm.rule.handoff_section_13

Scope: pm.object.sklad_karta

Pravidlo: Cost / recycling coefficients

Core objects:

- CIS_DU_O
- NAKL_KOEF
- SK_NAKL_POLOZKY
- IMP_MC_SK_NAKL_POL

NAKL_KOEF semantics from source:

- TYP_UPL 0 quantity, 1 volume, 2 weight, 3 purchase cost
- ZARADENIE 0 recycling, 1 electro, 2 hazardous, 3 other, 4 excise, 5 bonus, 6 deposit, 7 sugar
- TYP_KRAJINY is a 4-character applicability mask, NOT a country code

Registry snapshot:

- 48 coefficients, 47 active
- 4,488 active assignment references
- active assignments: 4,488; effective today: 4,487; one expired active assignment; no active/effective duplicate SKU+coefficient in tested snapshot

BOM auto process (MCCARTER.imp_SK_NAKL_POL_VYR):

- identifies finished products via executable INT_KOD prefix heuristic
- reads component mapping through BOM/structure
- uses component HMOTNOST_NETTO
- BOM quantity includes norm loss where defined
- DU7 controls recycle split; DU8 virgin, DU9 recycled
- supports CZ;SK token pairs, current token2 SK branch is dormant/mostly unused
- source deletes same product+NK_ID and inserts one row per component/token, which can overwrite instead of aggregate.

Confirmed DQ incidents:

- DQ-COEF-001: stale BOM-auto rows (101 product×coefficient groups / 42 products in PM07B)
- DQ-COEF-002: CRITICAL overwrite/no aggregation when multiple BOM components map to same NK_ID; 64 multi-component groups in PM07A
- DQ-COEF-003: stored vs current recompute mismatch
- DQ-COEF-004: missing stored auto coefficient where current mapping suggests one should exist (scope-sensitive)
- DQ-COEF-005: SK/CZ prefix naming is legacy/transitional; informational/warn, not jurisdiction truth
- DQ-COEF-006: report may include invalid/stored assignment in sugar/reporting branch due missing lifecycle filter

Coefficient quantity can include norm loss and is not automatically pure physical packed weight.

Dôkazy: pm.evidence.handoff

pm.rule.handoff_section_14

rule id: pm.rule.handoff_section_14

Scope: pm.object.sklad_karta

Pravidlo: FLAGS[12] — reporting eligibility

Business meaning CONFIRMED:

SKLAD_KARTA.FLAGS position 12 = “Nezahřňaj do prepočtu odpadov výrobkov”.

Typical business case: private-label/cofilling where another brand owner bears the waste-reporting responsibility.

Rules:

- FLAGS[12]=1 + cost/material coefficients is VALID and not a DQ defect.
- Do not infer private label/cofilling from product name or brand; the reporting switch in this scope is FLAGS[12].
- Current flag has no full historical valid-from history; historical eligibility cannot be reconstructed from current root alone.

Dôkazy: pm.evidence.handoff

pm.rule.handoff_section_15

rule id: pm.rule.handoff_section_15

Scope: pm.object.sklad_karta

Pravidlo: Recyklačný fond SK/CZ — confirmed report defect

Dreamer user reports:

- Recyklačný fond SK: CRW_REPORTS.ID=101, ID_FORM_SQL=20130, runtime TLAC_NASTAVENIA=000146, RID_RPT=455230002
- Recyklačný fond CZ: CRW_REPORTS.ID=102, ID_FORM_SQL=20130, runtime TLAC_NASTAVENIA=000149, RID_RPT=455230003

Runtime SQL captured from TLAC_QUEUE proves:

- detail sections apply SUBSTR(SK.FLAGS,12,1)='0'
- final RF total does not apply this filter in both SK and CZ variants

SK Q2/2026 reconciliation:

- total without flag exclusion: 154.416745 t -> PDF 154.42 t
- total with FLAGS[12]=0: 150.787039 t -> approx. 150.79 t
- excluded difference: 3.629706 t
- 12 contributing cards; user business-validated all 12 as private-label/cofilling

Canonical incident:

- DQ-REPORT-001
- severity: CRITICAL
- status: POTVRDENÉ
- scope: Recyklačný fond SK + CZ report total logic
- fix belongs to report SQL, NOT to SKLAD_KARTA values or coefficients
- task has already been recorded for Miroslav Jánošík outside the catalog.

Dôkazy: pm.evidence.handoff

pm.rule.handoff_section_16

rule id: pm.rule.handoff_section_16

Scope: pm.object.sklad_karta

Pravidlo: CIS_DU supplemental definitions

Relevant confirmed current definitions:

- DU1 Typ štítka SSCC
- DU4 WRIN
- DU5 Filter
- DU6 Týždne prognózy
- DU7 percent/recycled share
- DU8 auto coefficient mapping — virgin/non-recycled
- DU9 auto coefficient mapping — recycled

Other DU slots without active definition/population must not be assigned guessed meaning.

Dôkazy: pm.evidence.handoff

pm.rule.handoff_section_17

rule id: pm.rule.handoff_section_17

Scope: pm.object.sklad_karta

Pravidlo: Mutation / source flow requirements

Materialize root insert/update/storno behavior and critical-field Mutation Matrix from approved trigger/package evidence.

Critical source facts include:

- root insert trigger defaults HLAVNA_TP=self, NAHRADA=self, SK_ID=ID, RID_OBJ=RID, USED=1, DATUM=SYSDATE and other technical defaults
- replication bypass exists for update/delete paths
- root storno cascades/stornos related B_KOD_U, SKLAD_KARTA_LB, SKLAD_DODAVATEL under confirmed source rules
- STAV->8 side effect into MCCARTER_PLAN.MC_UKONCENY_PREDAJ_SK
- C_SKLAD_KARTA contains source-visible maintenance APIs; only classify specific caller/writer roles when source proves them
- no scheduler/caller absence may be treated as proof that external/app scheduling does not exist.

Dôkazy: pm.evidence.handoff

pm.rule.handoff_section_18

rule id: pm.rule.handoff_section_18

Scope: pm.object.sklad_karta

Pravidlo: Dependency / boundary contract

- Direct root dependency snapshot: 416 dependency rows / 414 objects
- C_SKLAD_KARTA is central API with large source dependency surface
- source-visible direct writers outside C_SKLAD_KARTA: 33

- static cross-schema ALL_DEPENDENCIES for root/API may be zero, but cross-schema synonyms/grants exist
- synonyms observed include MC_ST.SK_LAD_KARTA and MC_WWW references to C_SK_LAD_KARTA/SK_LAD_KARTA
- grants/synonyms = ACCESS CAPABILITY / DEPENDENCY ONLY until runtime/source role is proven
- dynamic SQL and application runtime outside Oracle source are explicit system boundaries.

External SK->CZ synchronization:

- business/technical evidence confirms batch `prenosdatcz.bat`
- Windows Scheduler every two hours
- source SK -> target CZ; current description includes card creation/update and EAN/selected master attributes
- existing-card pairing described via internal code
- exact SQL/scripts/procedures are DATA GAP and must not be invented.

Dôkazy: pm.evidence.handoff

pm.rule.handoff_section_20

rule id: pm.rule.handoff_section_20

Scope: pm.object.sklad_karta

Pravidlo: Canonical DQ rules to materialize

At minimum:

- identity/uniqueness snapshot checks with dated semantics
- root lookup orphan checks
- root-vs-satellite supplier divergence diagnostic
- SK_LAD_KARTA_FU VAT context divergence diagnostic
- packaging/EAN anomalies with scope and non-error caveats
- typed-note allergen coverage and duplicate/type ambiguity diagnostics
- DQ-COEF-001 through DQ-COEF-006
- DQ-REPORT-001 Recyklačný fond SK/CZ footer eligibility defect
- unresolved TYP_T current '00' as warning/non-blocking legacy condition, not cleanup target
- NAHRADA group diagnostics only; no auto-remediation.

Dôkazy: pm.evidence.handoff

pm.rule.handoff_section_29

rule id: pm.rule.handoff_section_29

Scope: pm.object.sklad_karta

Pravidlo: Post-closure MC revalidation 2026-09-16 — STAV 8 / Ukončený predaj forecast reset

Evidence delta

Approved new MC B2 evidence: `PM-12A — end of sale forecast reset current source.xlsx`, extracted from current `ALL\_SOURCE` / `ALL\_TRIGGERS` / `ALL\_OBJECTS`. This delta

supersedes the earlier unresolved defect description for the lock interaction.

Confirmed current MC flow

1. `MC.T\_SKLAD\_KARTA\_STAV\_AFTER\_MC` is an enabled row trigger on `MC.SKLAD\_KARTA`, `AFTER UPDATE OF STAV`. Replication sessions return early through `C\_Session.GetReplikacia`.
2. On the transition `:OLD.STAV <> 8 AND :NEW.STAV = 8`, the trigger calls `MCCARTER\_PLAN.MC\_UKONCENY\_PREDAJ\_SK(:NEW.ID)`.
3. `MC.MCCARTER\_PLAN.MC\_UKONCENY\_PREDAJ\_SK` computes the current week-period code and updates future/current forecast rows in `OBCH\_PL\_O` for the SKU. It sets `PLAN\_POCET2 = 0` and simultaneously replaces `POZN` with text beginning `Ukončený predaj`, including the current date and original planned quantity. Scope is `OBCH\_PL\_L.TYP\_PLANU` in `(OPTyp\_Proгноza, OPTyp\_PrognPartn)`, matching `KOD\_ID`, from the current week-period forward.
4. `MC.T\_OBCH\_PL\_LOCK\_MC` is an enabled row trigger on `MC.OBCH\_PL\_O`, `AFTER INSERT OR UPDATE OF PLAN\_POCET2`. For ordinary updates it still prevents a changed `PLAN\_POCET2` on a locked row where `BITAND(:NEW.STAV,2)=2`.
5. The current MC trigger contains a dedicated exception before the lock error:
 - if `POZN` changed and `:NEW.POZN LIKE '%Ukončený predaj%'`, the trigger executes `NULL` and does not raise the lock error.
6. Therefore the system-driven STAV=8 flow can zero `PLAN\_POCET2` even in the locked operative period, while the normal lock remains active for ordinary/user changes. Existing forecast-transfer exceptions based on `(+)` and `(%)` notes remain unchanged. Insert-time protection also remains unchanged.

Change localization

Current MC object timestamps from PM-12A localize the deployed change to the lock trigger:

- `MC.T\_OBCH\_PL\_LOCK\_MC` LAST_DDL_TIME = `2026-09-16 09:39:59`.
- `MC.T\_SKLAD\_KARTA\_STAV\_AFTER\_MC` LAST_DDL_TIME = `2026-08-16 10:28:27`.
- `MC.MCCARTER\_PLAN` package body LAST_DDL_TIME = `2026-08-16 10:35:33`.

This proves the current MC fix was implemented in `T\_OBCH\_PL\_LOCK\_MC`; the STAV=8 trigger and `MC\_UKONCENY\_PREDAJ\_SK` procedure were not changed as part of this deployment. TEST/MCCZ source visible in the same export is auxiliary only and must not be treated as MC authority.

Resolved defect / canonical status

Status: `POTVRDENÉ — VYRIEŠENÉ` for MC as of 2026-09-16.

Old defect: the STAV=8 procedure attempted to zero future `OBCH\_PL\_O.PLAN\_POCET2`, but `T\_OBCH\_PL\_LOCK\_MC` interpreted the system update like an ordinary edit and raised the locked-period error.

Resolved behavior: `T\_OBCH\_PL\_LOCK\_MC` now recognizes the specific system update by the simultaneous change of `POZN` to the `Ukončený predaj` marker and bypasses only that lock guard. Standard lock behavior remains in place for other changes.

Mutation Matrix delta

`SKLAD\_KARTA.STAV: !=8 -> 8` -> `T\_SKLAD\_KARTA\_STAV\_AFTER\_MC` -> replication guard -> `MCCARTER\_PLAN.MC\_UKONCENY\_PREDAJ\_SK(SK.ID)` -> `OBCH\_PL\_O.PLAN\_POCET2=0` + `POZN='Ukončený predaj ... (pôvodne: ...)'` -> `T\_OBCH\_PL\_LOCK\_MC` detects the dedicated note marker -> lock bypass only for this system flow -> update succeeds.

DO NOT ASSUME delta

- Do not describe the new mechanism as a global lock bypass. The bypass is conditional on the simultaneous note mutation matching `Ukončený predaj`.

- Do not infer that `STAV` lock is removed; ordinary `PLAN\_PO CET2` updates on locked rows are still rejected.
- Do not remove the `POZN` mutation from the procedure contract: it is now part of the executable bypass contract.
- Do not generalize TEST/MCCZ behavior to MC without separate validation.

Codex acceptance delta

Materialize this flow as confirmed B2 evidence in the Product Master mutation/source-flow contract. Add an acceptance assertion that the STAV=8 system flow has an explicit `T\_OBCH\_PL\_LOCK\_MC` exception, while the generic `BITAND(STAV,2)=2` lock guard remains documented for ordinary updates. Record this as a non-breaking semantic revision dated 2026-09-16.

pm.rel.typed_notes

relationship id: pm.rel.typed_notes

from object ref: pm.object.sklad_karta

from field refs: pm.field.sklad_karta.rid

to object ref: pm.object.cis_poznamky

to field refs: pm.field.cis_poznamky.rid_v

relationship type: CONDITIONAL

cardinality: 1:N

Podmienka: Product-card RID context only; CIS_POZNAMKY is generic/polymorphic. Current allergen authority.

Fan out riziko: HIGH

Bezpečné použitie: Preserve declared contextual grain; preaggregate satellites independently.

Snapshot: 2026-09-14

Status: POTVRDENÉ

Dôkazy: pm.evidence.handoff

pm.evidence.pm-08e

pm.rel.note_type

relationship id: pm.rel.note_type

from object ref: pm.object.cis_poznamky

from field refs: pm.field.cis_poznamky.typ

to object ref: pm.object.cis_poznamky_tpy

to field refs: pm.field.cis_poznamky_tpy.id

relationship type: CONDITIONAL

cardinality: N:1

Podmienka: Meaning comes from typed-note dictionary; direct and cross-contamination stay separate.

Fan out riziko: HIGH

Bezpečné použitie: Preserve declared contextual grain; preaggregate satellites independently.

Snapshot: 2026-09-14

Status: POTVRDENÉ

Dôkazy: pm.evidence.handoff

pm.evidence.pm-09b

pm.rel.supplier

relationship id: pm.rel.supplier

from object ref: pm.object.sklad_karta

from field refs: pm.field.sklad_karta.id

to object ref: pm.object.sklad_dodavatel

to field refs: pm.field.sklad_dodavatel.kod_id

relationship type: CONDITIONAL

cardinality: 1:N

Podmienka: Active natural grain KOD_ID + ID_DODAVATELA; not continuous root synchronization.

Fan out riziko: HIGH

Bezpečné použitie: Preserve declared contextual grain; preaggregate satellites independently.

Snapshot: 2026-09-14

Status: POTVRDENÉ

pm.boundary_field.obch_pl_o.pozn

writer ref: pm.oracle.mc.t_sklad_karta_stav_after_mc.trigger

Rola zapisovateľa: TRIGGER SIDE EFFECT

Udalosť: AFTER UPDATE OF STAV

Podmienka: OLD.STAV <> 8 AND NEW.STAV = 8

session or bypass sk: C_Session.GetReplikacia: replication returns early.

Priama mutácia: Calls MCCARTER_PLAN.MC_UKONCENY_PREDAJ_SK(NEW.ID). Current/future OBCH_PL_O forecast types OPTyp_Proгноza / OPTyp_PrognPartn: PLAN_PO CET2=0 and POZN beginning Ukončený predaj with date and original quantity. POZN is part of the executable bypass contract.

Status: POTVRDENÉ

Dôkazy: pm.evidence.handoff
pm.evidence.pm-12a

pm.mutation.end_of_sale_reset

mutation id: pm.mutation.end_of_sale_reset

target refs: pm.boundary_field.obch_pl_o.plan_pocet2
pm.boundary_field.obch_pl_o.pozn

writer ref: pm.oracle.mc.mccarter_plan.package_body

Rola zapisovateľa: DIRECT WRITER

Udalosť: MC_UKONCENY_PREDAJ_SK(SK.ID)

Podmienka: Matching SKU; current week-period forward; OBCH_PL_L.TYP_PLANU in OPTyp_Proгноza / OPTyp_PrognPartn.

session or bypass sk: null

Priama mutácia: Directly sets OBCH_PL_O.PLAN_PO CET2=0 and POZN beginning Ukončený predaj with date and original quantity; the simultaneous note change is required by the dedicated lock exception.

Status: POTVRDENÉ

Dôkazy: pm.evidence.handoff
pm.evidence.pm-12a

pm.mutation.bom_coefficients

mutation id: pm.mutation.bom_coefficients

target refs: pm.object.sk_nakl_položky

writer ref: pm.oracle.mc.mccarter.package_body

Rola zapisovateľa: DIRECT WRITER

Udalosť: imp_SK_NAKL_POL_VYR

Podmienka: Active BOM rows; executable finished-product INT_KOD prefix 3; DU8/DU9 tokens.

session or bypass sk: null

Priama mutácia: Uses component HMOTNOST_NETTO times BOM POCET (can include norm loss), DU7 split and CZ;SK tokens. Deletes product+NK_ID then inserts per component/token: overwrite instead of aggregation. DQ-COEF-001..006 remain incidents; do not normalize away.

Status: POTVRDENÉ

10 Kvalita údajov a známe nálezy

Aktuálne DQ pravidlá a interpretácia

Kanonický zdroj: catalog/master/skladove-karty/data-quality.yaml

pm.dq.coef_001

dq id: pm.dq.coef_001

Scope: pm.object.sk_nakl_polozky

observation sk: DQ-COEF-001: stale BOM-auto rows (101 product×coefficient groups / 42 products in PM07B)

Snapshot: 2026-09-15

Blokujúce: false

Status: POTVRDENÉ

Dôkazy: pm.evidence.handoff

interpretation limit sk: Scope-sensitive; no automatic master-data remediation. Preserve norm loss, lifecycle/effective context and jurisdiction boundary.

incident code: DQ-COEF-001

pm.dq.coef_002

dq id: pm.dq.coef_002

Scope: pm.object.sk_nakl_polozky

observation sk: DQ-COEF-002: CRITICAL overwrite/no aggregation when multiple BOM components map to same NK_ID; 64 multi-component groups in PM07A

Snapshot: 2026-09-15

Blokujúce: false

Status: POTVRDENÉ

Dôkazy: pm.evidence.handoff

interpretation limit sk: Scope-sensitive; no automatic master-data remediation. Preserve norm loss, lifecycle/effective context and jurisdiction boundary.

incident code: DQ-COEF-002

severity: CRITICAL

pm.dq.coef_003

dq id: pm.dq.coef_003

Scope: pm.object.sk_nakl_polozky

observation sk: DQ-COEF-003: stored vs current recompute mismatch

Snapshot: 2026-09-15

Blokujúce: false

Status: POTVRDENÉ

Dôkazy: pm.evidence.handoff

interpretation limit sk: Scope-sensitive; no automatic master-data remediation. Preserve norm loss, lifecycle/effective context and jurisdiction boundary.

incident code: DQ-COEF-003

pm.dq.coef_004

dq id: pm.dq.coef_004

Scope: pm.object.sk_nakl_položky

observation sk: DQ-COEF-004: missing stored auto coefficient where current mapping suggests one should exist (scope-sensitive)

Snapshot: 2026-09-15

Blokujúce: false

Status: POTVRDENÉ

Dôkazy: pm.evidence.handoff

interpretation limit sk: Scope-sensitive; no automatic master-data remediation. Preserve norm loss, lifecycle/effective context and jurisdiction boundary.

incident code: DQ-COEF-004

pm.dq.coef_005

dq id: pm.dq.coef_005

Scope: pm.object.sk_nakl_položky

observation sk: DQ-COEF-005: SK/CZ prefix naming is legacy/transitional; informational/warn, not jurisdiction truth

Snapshot: 2026-09-15

Blokujúce: false

Status: POTVRDENÉ

Dôkazy: pm.evidence.handoff

interpretation limit sk: Scope-sensitive; no automatic master-data remediation. Preserve norm loss, lifecycle/effective context and jurisdiction boundary.

incident code: DQ-COEF-005

severity: WARNING

pm.dq.coef_006

dq id: pm.dq.coef_006

Scope: pm.object.sk_nakl_položky

observation sk: DQ-COEF-006: report may include invalid/storned assignment in sugar/reporting branch due missing lifecycle filter

Snapshot: 2026-09-15

Blokujúce: false

Status: POTVRDENÉ

Dôkazy: pm.evidence.handoff

interpretation limit sk: Scope-sensitive; no automatic master-data remediation. Preserve norm loss, lifecycle/effective context and jurisdiction boundary.

incident code: DQ-COEF-006

pm.dq.report_001

dq id: pm.dq.report_001

Scope: pm.object.sklad_karta

pm.object.sk_nakl_položky

observation sk: DQ-REPORT-001; CRITICAL; POTVRDENÉ. Both SK and CZ total/footer omit FLAGS[12] eligibility filter present in detail. Fix belongs to report SQL, not master values or coefficients.

Snapshot: 2026-09-15

Blokujúce: false

Status: POTVRDENÉ

Dôkazy: pm.evidence.handoff

pm.evidence.pm-11p

pm.evidence.pm-11n

pm.evidence.pm-11s2

interpretation limit sk: SK Q2/2026: 154.416745 t versus 150.787039 t; excluded 3.629706 t, 12 cards. Current master does not reconstruct historical eligibility.

incident code: DQ-REPORT-001

severity: CRITICAL

pm.dq.logistics

dq id: pm.dq.logistics

Scope: pm.object.sklad_karta_lb

observation sk: 5 active LB missing exact piece code; 4 active unlinked codes; 1 linked to inactive LB; 1 code not represented by LB level; 14 main LB without main piece code; 27 active shared codes. Candidates are scope-dependent, not automatic errors.

Snapshot: 2026-09-14

Blokujúce: false

Status: POTVRDENÉ

Dôkazy: pm.evidence.handoff

pm.evidence.lm-03c

pm.dq.supplier

dq id: pm.dq.supplier

Scope: pm.object.sklad_dodavatel

observation sk: 102 matches; 13 root main suppliers absent from active satellite. DOD_KOD, KOD_DOD, VYROBCA_KOD are not synonyms.

Snapshot: 2026-09-14

Blokujúce: false

Status: POTVRDENÉ

Dôkazy: pm.evidence.handoff

pm.evidence.pm-05e

pm.dq.vat

dq id: pm.dq.vat

Scope: pm.object.sklad_karta_fu

observation sk: 2080 false / 481 true SAME_AS_ROOT. Contextual overrides may be valid.

Snapshot: 2026-09-14

Blokujúce: false

Status: POTVRDENÉ

Dôkazy: pm.evidence.handoff

pm.evidence.pm-05f

pm.dq.nahrada

dq id: pm.dq.nahrada

Scope: pm.object.sklad_karta

observation sk: 164 groups; 3162 nonzero rows; 164 anchors; 2998 other members; 837 USED=1. No substitutability or automatic remediation.

Snapshot: 2026-09-14

Blokujúce: false

Status: POTVRDENÉ

Dôkazy: pm.evidence.handoff

pm.evidence.pm-10f

pm.dq.typ_t

dq id: pm.dq.typ_t

Scope: pm.object.sklad_karta

observation sk: 12 unresolved '00'; no ID/TYP_T/tree resolution. No guessed classification or cleanup.

Snapshot: 2026-09-14

Blokujúce: false

Status: POTVRDENÉ

Dôkazy: pm.evidence.handoff

pm.evidence.pm-10b2

11 DO NOT ASSUME

pm.rule.do_not_assume_01

rule id: pm.rule.do_not_assume_01

Scope: pm.object.sklad_karta

Pravidlo: ID=SK_ID and RID=RID_OBJ are current observations, not immutable/cross-environment laws.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_02

rule id: pm.rule.do_not_assume_02

Scope: pm.object.sklad_karta

Pravidlo: INT_KOD is currently unique in MC but design uniqueness is (INT_KOD,SKLAD).

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_03

rule id: pm.rule.do_not_assume_03

Scope: pm.object.sklad_karta

Pravidlo: USED=1 does not mean “in sale”; STAV and technical active state are separate.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_04

rule id: pm.rule.do_not_assume_04

Scope: pm.object.sklad_karta

Pravidlo: N_STAMP is not creation/current-state/exit/last-update timestamp.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_05

rule id: pm.rule.do_not_assume_05

Scope: pm.object.sklad_karta

Pravidlo: Current master attributes are not historical transaction truth.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_06

rule id: pm.rule.do_not_assume_06

Scope: pm.object.sklad_karta

Pravidlo: NAHRADA is a confirmed technical group relation, but not a confirmed business substitution rule.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_07

rule id: pm.rule.do_not_assume_07

Scope: pm.object.sklad_karta

Pravidlo: lookup S_STAMP nonzero does not automatically invalidate an existing root reference.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_08

rule id: pm.rule.do_not_assume_08

Scope: pm.object.sklad_karta

Pravidlo: grants/synonyms/dependencies do not prove runtime reader/writer/caller roles.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_09

rule id: pm.rule.do_not_assume_09

Scope: pm.object.sklad_karta

Pravidlo: missing logistics is not a universal error; scope by card type/use case.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_10

rule id: pm.rule.do_not_assume_10

Scope: pm.object.sklad_karta

Pravidlo: VYROBCA is not general manufacturer authority.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_11

rule id: pm.rule.do_not_assume_11

Scope: pm.object.sklad_karta

Pravidlo: selective history and SK_TEMP are not complete audit history.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_12

rule id: pm.rule.do_not_assume_12

Scope: pm.object.sklad_karta

Pravidlo: no trigger ordering assumptions without source/DB evidence.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_13

rule id: pm.rule.do_not_assume_13

Scope: pm.object.sklad_karta

Pravidlo: no absence-of-dependency/job claim proves no external/dynamic flow.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_14

rule id: pm.rule.do_not_assume_14

Scope: pm.object.sklad_karta

Pravidlo: do not enforce NETTO<=gross or unit conversions until units are business-confirmed.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_15

rule id: pm.rule.do_not_assume_15

Scope: pm.object.sklad_karta

Pravidlo: root logistics fields are not authoritative roll-up of all packaging levels.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_16

rule id: pm.rule.do_not_assume_16

Scope: pm.object.sklad_karta

Pravidlo: process documents/proposals are not implementation unless separately evidenced.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_17

rule id: pm.rule.do_not_assume_17

Scope: pm.object.sklad_karta

Pravidlo: INT_KOD prefixes are conventions, not taxonomy replacement.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_18

rule id: pm.rule.do_not_assume_18

Scope: pm.object.sklad_karta

Pravidlo: coefficient values may include norm loss; not pure physical mass by default.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_19

rule id: pm.rule.do_not_assume_19

Scope: pm.object.sklad_karta

Pravidlo: missing coefficient is not globally a DQ defect; scope matters.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_20

rule id: pm.rule.do_not_assume_20

Scope: pm.object.sklad_karta

Pravidlo: TetraPak composite/breakdown can double count if layers are mixed; preserve provenance.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_21

rule id: pm.rule.do_not_assume_21

Scope: pm.object.sklad_karta

Pravidlo: coefficient unit must not be inferred from label alone.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_22

rule id: pm.rule.do_not_assume_22

Scope: pm.object.sklad_karta

Pravidlo: DU7/8/9 are supplemental mapped fields, not universal business taxonomy.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_23

rule id: pm.rule.do_not_assume_23

Scope: pm.object.sklad_karta

Pravidlo: scheduler identity must not be inferred.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_24

rule id: pm.rule.do_not_assume_24

Scope: pm.object.sklad_karta

Pravidlo: TYP_KRAJINY is applicability mask, not country code.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_25

rule id: pm.rule.do_not_assume_25

Scope: pm.object.sklad_karta

Pravidlo: S_STAMP=0 assignment does not by itself prove effective-today semantics.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_26

rule id: pm.rule.do_not_assume_26

Scope: pm.object.sklad_karta

Pravidlo: BOM DATUM_OD is generation/effective date, not necessarily origin date.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_27

rule id: pm.rule.do_not_assume_27

Scope: pm.object.sklad_karta

Pravidlo: current assignment uniqueness observations are not physical UQ constraints unless metadata says so.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_28

rule id: pm.rule.do_not_assume_28

Scope: pm.object.sklad_karta

Pravidlo: imp_SK_NAKL_POL_VYR INT_KOD prefix logic is executable heuristic, not universal business rule.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_29

rule id: pm.rule.do_not_assume_29

Scope: pm.object.sklad_karta

Pravidlo: source supports dual CZ;SK mapping; current token2 use may be dormant.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_30

rule id: pm.rule.do_not_assume_30

Scope: pm.object.sklad_karta

Pravidlo: SK_LOG_UDAJE overrides are contextual; root fields are not universal effective context.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_31

rule id: pm.rule.do_not_assume_31

Scope: pm.object.sklad_karta

Pravidlo: supplier satellite is not assumed continuously synchronized with root.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_32

rule id: pm.rule.do_not_assume_32

Scope: pm.object.sklad_karta

Pravidlo: TYP_T='00' is unresolved; do not classify with it.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_33

rule id: pm.rule.do_not_assume_33

Scope: pm.object.sklad_karta

Pravidlo: partner code pair is not globally unique.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_34

rule id: pm.rule.do_not_assume_34

Scope: pm.object.sklad_karta

Pravidlo: DU meanings are only those explicitly evidenced.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_35

rule id: pm.rule.do_not_assume_35

Scope: pm.object.sklad_karta

Pravidlo: SK/CZ coefficient name prefixes are legacy/transitional, not jurisdiction keys.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_36

rule id: pm.rule.do_not_assume_36

Scope: pm.object.sklad_karta

Pravidlo: reporting jurisdiction comes from transaction/partner/report context, not coefficient name.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_37

rule id: pm.rule.do_not_assume_37

Scope: pm.object.sklad_karta

Pravidlo: product component weights are inputs; placed-on-market quantity is downstream/report-specific.

Dôkazy: pm.evidence.handoff

pm.rule.do_not_assume_38

12 Diagnostické playbooky

Vstupné diagnostické postupy

Kanonický zdroj: catalog/master/skladove-karty/playbooks.yaml

pm.playbook.01

playbook id: pm.playbook.01

Symptóm: Nesedí stav skladovej karty

Prvá diagnostika: pm.sql.current_state

Dokazuje: Independent USED and STAV plus technical stamps.

Nedokazuje: USED=1 is not in sale; N_STAMP not creation; no full history.

Ďalší krok: Interpret with the linked grain/fan-out contract and approved source/evidence. Escalate unresolved business meaning; no automatic master-data fix.

flow refs: []

dependency or boundary refs: []

temporal boundary sk: RAW CURRENT / selective history; no arbitrary historical reconstruction.

pm.playbook.02

playbook id: pm.playbook.02

Symptóm: Chýba / nesedí EAN alebo balenie

Prvá diagnostika: pm.sql.logistics

Dokazuje: Current packaging hierarchy and level-associated codes.

Nedokazuje: Root logistics fields are not universal roll-up; missing packaging not universally an error.

Ďalší krok: Interpret with the linked grain/fan-out contract and approved source/evidence. Escalate unresolved business meaning; no automatic master-data fix.

flow refs: []

dependency or boundary refs: []

temporal boundary sk: RAW CURRENT / selective history; no arbitrary historical reconstruction.

pm.playbook.03

playbook id: pm.playbook.03

Symptóm: Nesedí dodávateľský kód

Prvá diagnostika: pm.sql.supplier

Dokazuje: Root versus supplier satellite values.

Nedokazuje: DOD_KOD/KOD_DOD/VYROBCA_KOD equivalence or continuous synchronization.

Ďalší krok: Interpret with the linked grain/fan-out contract and approved source/evidence. Escalate unresolved business meaning; no automatic master-data fix.

flow refs: []

dependency or boundary refs: []

temporal boundary sk: RAW CURRENT / selective history; no arbitrary historical reconstruction.

pm.playbook.04

playbook id: pm.playbook.04

Symptóm: Nesedí DPH

Prvá diagnostika: pm.sql.vat_context

Dokazuje: Root and contextual VAT values.

Nedokazuje: Root VAT is not universal; does not execute session-dependent API resolution.

Ďalší krok: Interpret with the linked grain/fan-out contract and approved source/evidence. Escalate unresolved business meaning; no automatic master-data fix.

flow refs: []

dependency or boundary refs: []

temporal boundary sk: RAW CURRENT / selective history; no arbitrary historical reconstruction.

pm.playbook.05

playbook id: pm.playbook.05

Symptóm: Nesedia alergény

Prvá diagnostika: pm.sql.typed_notes

Dokazuje: Current operational typed-note values and dictionary meaning.

Nedokazuje: Not every note is allergen; not full historical or downstream manufacturing truth.

Ďalší krok: Interpret with the linked grain/fan-out contract and approved source/evidence. Escalate unresolved business meaning; no automatic master-data fix.

flow refs: []

dependency or boundary refs: []

temporal boundary sk: RAW CURRENT / selective history; no arbitrary historical reconstruction.

pm.playbook.06

playbook id: pm.playbook.06

Symptóm: Nesedia nákladové/recyklačné koeficienty

Prvá diagnostika: pm.sql.bom_audit

Dokazuje: BOM aktuálny súčet proti uloženým hodnotám

Nedokazuje: Diagnostic aggregate, not a corrected writer. Prefix 3 is executable heuristic, not taxonomy. O.POCET may include norm loss; no extra loss multiplication. Current INT_KOD and DU uniqueness must be checked. Unsupported DU7 stays NULL. No historical eligibility or pure packed-weight claim.

Ďalší krok: Interpret with the linked grain/fan-out contract and approved source/evidence. Escalate unresolved business meaning; no automatic master-data fix.

flow refs: []

dependency or boundary refs: []

temporal boundary sk: RAW CURRENT / selective history; no arbitrary historical reconstruction.

pm.playbook.07

playbook id: pm.playbook.07

Symptóm: Recyklačný fond total nesedí detailu

Prvá diagnostika: pm.sql.recycling_reconciliation

Dokazuje: RF footer comparison retaining legacy name-prefix filter, plus explicit eligibility split.

Nedokazuje: Does not fix report or master. No added coefficient lifecycle filter. Market is explicit SK/CZ context, not inferred jurisdiction; date binds must match captured whole-month periods. Current values cannot reconstruct historical master.

Ďalší krok: Interpret with the linked grain/fan-out contract and approved source/evidence. Escalate unresolved business meaning; no automatic master-data fix.

flow refs: []

dependency or boundary refs: []

temporal boundary sk: RAW CURRENT / selective history; no arbitrary historical reconstruction.

pm.playbook.08

playbook id: pm.playbook.08

Symptóm: Historický report nesedí dnešnej karte

Prvá diagnostika: pm.sql.current_state

Dokazuje: Independent USED and STAV plus technical stamps.

Nedokazuje: USED=1 is not in sale; N_STAMP not creation; no full history.

Ďalší krok: Interpret with the linked grain/fan-out contract and approved source/evidence. Escalate unresolved business meaning; no automatic master-data fix.

flow refs: []

dependency or boundary refs: []

temporal boundary sk: RAW CURRENT / selective history; no arbitrary historical reconstruction.

pm.playbook.09

playbook id: pm.playbook.09

Symptóm: NAHRADA vyzerá nesprávne

Prvá diagnostika: pm.sql.nahrada

Dokazuje: Technical self-anchor membership only.

Nedokazuje: Physical/commercial substitutability, exact runtime business use, automatic remediation.

Ďalší krok: Interpret with the linked grain/fan-out contract and approved source/evidence. Escalate unresolved business meaning; no automatic master-data fix.

flow refs: []

dependency or boundary refs: []

temporal boundary sk: RAW CURRENT / selective history; no arbitrary historical reconstruction.

pm.playbook.10

playbook id: pm.playbook.10

Symptóm: STAV=8 a uzamknutá prognóza

Prvá diagnostika: pm.sql.end_of_sale_source

Dokazuje: Source-visible POZN marker exception and ordinary BITAND(STAV,2)=2 guard; replication condition.

Nedokazuje: Executing or globally bypassing locks. Package line window is dated PM-12A locator and may move after DDL.

Ďalší krok: Interpret with the linked grain/fan-out contract and approved source/evidence. Escalate unresolved business meaning; no automatic master-data fix.

flow refs: pm.flow.end_of_sale

pm.flow.forecast_lock

dependency or boundary refs: []

temporal boundary sk: RAW CURRENT / selective history; no arbitrary historical reconstruction.

Zmena: Post-closure MC revalidation 2026-09-16 — STAV 8 / Ukončený predaj forecast reset

Evidence delta

Approved new MC B2 evidence: `PM-12A — end of sale forecast reset current source.xlsx`, extracted from current `ALL\_SOURCE` / `ALL\_TRIGGERS` / `ALL\_OBJECTS`. This delta supersedes the earlier unresolved defect description for the lock interaction.

Confirmed current MC flow

1. `MC.T\_SKLAD\_KARTA\_STAV\_AFTER\_MC` is an enabled row trigger on `MC.SKLAD\_KARTA`, `AFTER UPDATE OF STAV`. Replication sessions return early through `C\_Session.GetReplikacia`.
2. On the transition `:OLD.STAV <> 8 AND :NEW.STAV = 8`, the trigger calls `MCCARTER\_PLAN.MC\_UKONCENY\_PREDAJ\_SK(:NEW.ID)`.
3. `MC.MCCARTER\_PLAN.MC\_UKONCENY\_PREDAJ\_SK` computes the current week-period code and updates future/current forecast rows in `OBCH\_PL\_O` for the SKU. It sets `PLAN\_POCET2 = 0` and simultaneously replaces `POZN` with text beginning `Ukončený predaj`, including the current date and original planned quantity. Scope is `OBCH\_PL\_L.TYP\_PLANU` in (OPTyp_Proгноza, OPTyp_PrognPartn), matching `KOD\_ID`, from the current week-period forward.
4. `MC.T\_OBCH\_PL\_LOCK\_MC` is an enabled row trigger on `MC.OBCH\_PL\_O`, `AFTER INSERT OR UPDATE OF PLAN\_POCET2`. For ordinary updates it still prevents a changed `PLAN\_POCET2` on a locked row where `BITAND(:NEW.STAV,2)=2`.
5. The current MC trigger contains a dedicated exception before the lock error:
 - if `POZN` changed and `:NEW.POZN LIKE '%Ukončený predaj%'`, the trigger executes `NULL` and does not raise the lock error.
6. Therefore the system-driven STAV=8 flow can zero `PLAN\_POCET2` even in the locked operative period, while the normal lock remains active for ordinary/user changes. Existing forecast-transfer exceptions based on `(+%)` and `(-%)` notes remain unchanged. Insert-time protection also remains unchanged.

Change localization

Current MC object timestamps from PM-12A localize the deployed change to the lock trigger:

- `MC.T\_OBCH\_PL\_LOCK\_MC` LAST_DDL_TIME = `2026-09-16 09:39:59`.
- `MC.T\_SKLAD\_KARTA\_STAV\_AFTER\_MC` LAST_DDL_TIME = `2026-08-16 10:28:27`.
- `MC.MCCARTER\_PLAN` package body LAST_DDL_TIME = `2026-08-16 10:35:33`.

This proves the current MC fix was implemented in `T\_OBCH\_PL\_LOCK\_MC`; the STAV=8 trigger and `MC\_UKONCENY\_PREDAJ\_SK` procedure were not changed as part of this deployment. TEST/MCCZ source visible in the same export is auxiliary only and must not be treated as MC authority.

Resolved defect / canonical status

Status: `POTVRDENÉ — VYRIEŠENÉ` for MC as of 2026-09-16.

Old defect: the STAV=8 procedure attempted to zero future `OBCH\_PL\_O.PLAN\_POCET2`, but `T\_OBCH\_PL\_LOCK\_MC` interpreted the system update like an ordinary edit and raised the locked-period error.

Resolved behavior: `T\_OBCH\_PL\_LOCK\_MC` now recognizes the specific system update by the simultaneous change of `POZN` to the `Ukončený predaj` marker and bypasses only that lock guard. Standard lock behavior remains in place for other changes.

Mutation Matrix delta

`SKLAD\_KARTA.STAV: !=8 -> 8` -> `T\_SKLAD\_KARTA\_STAV\_AFTER\_MC` -> replication guard -> `MCCARTER\_PLAN.MC\_UKONCENY\_PREDAJ\_SK(SK.ID)` -> `OBCH\_PL\_O.PLAN\_POCET2=0` + `POZN='Ukončený predaj ... (pôvodne: ...)'` -> `T\_OBCH\_PL\_LOCK\_MC` detects the dedicated note marker -> lock bypass only for this system flow -> update succeeds.

DO NOT ASSUME delta

- Do not describe the new mechanism as a global lock bypass. The bypass is conditional on the simultaneous note mutation matching `Ukončený predaj`.
- Do not infer that `STAV` lock is removed; ordinary `PLAN\_POCET2` updates on locked rows are still rejected.
- Do not remove the `POZN` mutation from the procedure contract: it is now part of the executable bypass contract.
- Do not generalize TEST/MCCZ behavior to MC without separate validation.

Codex acceptance delta

Materialize this flow as confirmed B2 evidence in the Product Master mutation/source-flow contract. Add an acceptance assertion that the STAV=8 system flow has an explicit `T\_OBCH\_PL\_LOCK\_MC` exception, while the generic `BITAND(STAV,2)=2` lock guard remains documented for ordinary updates. Record this as a non-breaking semantic revision dated 2026-09-16.

Dôvod: Earlier locked-period conflict -> POTVRDENÉ — VYRIEŠENÉ on MC. Deployed change localized to T_OBCH_PL_LOCK_MC.

Zmena: Approved naming-only delta: populate all 169 MC.SKLADE_KARTA canonical_alias values from the retained CSV. TECHNICAL_NEUTRAL does not expand unresolved acronyms or close semantic gaps. Supersedes the historical 2026-09-16 null-alias deferral for root fields only.

Dôvod: Non-breaking additive completion of previously null aliases: no existing alias renamed or removed; stable IDs, physical names and every other field property are unchanged. Definitions, status, evidence, temporal rules, lookup meanings and all seven backlog items retain their prior meaning.

Dôkazy: pm.evidence.alias_dictionary_v1
